TightRope (R) CCL Repair Course **Registration is NOW Open** **Ohio State** **University** **April 21st**

The TightRope CCL technique was developed to provide a minimally invasive method for extracapsular stabilization of the cranial cruciate ligament-deficient canine stifle. TightRope CCL seeks to optimize the lateral suture stabilization technique by employing bone-to-bone fixation, an implant with superior strength and stiffness designed specifically for ligament repair, and a method for consistent isometric implant placement. As such, TightRope CCL can counteract cranial tibial thrust, drawer, and internal rotation while providing optimal joint range of motion. Over 2500 clinical cases have been reported showing this procedure to have a 94.9% success rate. The TightRope(R) can also be used for hip luxation repair. For more information on this CE Course see link below.

Don't miss out on this CE opportunity to learn the newest and most innovative extracapsular stabilization technique available. The New Swivelock Anchor allows you to stabilize the joint by anchoring the Arthrex Vet System's FiberTape on the femoral fixation point without having to tie knots or use a crimp. Minimal equipment is required to get started using this technique. .
